

Option	Description
Remove punctuation	Specifies whether to remove punctuation from your data to help provide more accurate matches. Be aware of the following: • This option is valid for English language, Latin1 data only. • This option is ignored for all other Match engine values. Yes: Removes punctuation. No: Keeps punctuation in your data.  Note: This option works on the mapped input field used in this and other criteria. If you set this option for something different than how it is set in another criterion using the same field, it overwrites that setting. Before setting this option, be sure that there are no other criteria using this same field.
Field compare length	Specifies the number of characters in the field to compare.
